

THE BALMORAL

Impeccable breeding, impeccable performance – the Balmoral is undoubtedly one of the best petrol cylinder lawnmowers on the market today. This superbly built machine features a powerful engine and the revolutionary QX™ system.

This 'Quick Exchange' system allows you to not only remove the blade cassette for re-grinding or replacement purposes, but also to turn your lawnmower into a powered rake by substituting the standard six-bladed cassette with the QX™ Lawn Scarifier cassette accessory. Also available is the 10 multi-bladed QX™ cassette to ensure an even finer cut.

The combination of advanced lawnmower technology and a number of special features give the Balmoral an unbeatable cutting performance. For longer grass, you can attach the supplied side wheels which then elevate the mower to provide an effortless cut. The spring tine comb also lifts the grass prior to cutting to ensure an even cut, and a stainless steel front roller and heavy steel rear roller produce those beautiful, classic stripes that are the hallmark of an Atco lawn. Manoeuvrability on the larger 17" and 20" models is further enhanced by a split differential on the rear roller.

The Balmoral is controlled by a three-way drive facility which allows the blades to be disengaged without stopping the engine, convenient for emptying the grassbox and for powered manoeuvres around the garden. Also, when mowing in awkward corners or around trees, you can disengage the drive for manual control.

Features such as foam-cushioned handles, a larger, more manageable throttle and micro-set cutting height adjuster are all designed to make mowing the lawn a positive pleasure.

The Balmoral, available in 14", 17" and 20" cutting widths and with recoil or key start options.

The QX™ interchangeable scarifier cassette available as a separate accessory.

All Balmoral SE models feature electronic ignition.
